High Speed 2 Port Valve

SX10 Series

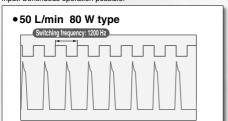

Long service life: 5 billion cycles or more

SMC's original valve and coil structure realizes a longer product life and requires less maintenance frequency.

(50 L/min type, 24 VDC, 0.25 MPa. Based on SMC life test conditions.)

High frequency: 1200 Hz

Good followability and response to successive electrical signal input. Continuous operation possible.

2 mounting types

Quick disconnect type

Screw mount type

The manifold base should be prepared by users.

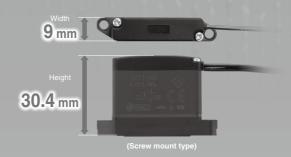

Low power consumption: 4 W Continuous energization for extended periods is possible.

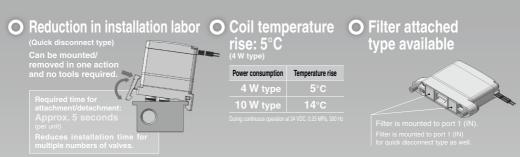

VO

LVM

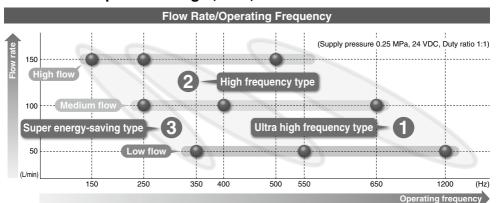

O Compact and Space-saving • The manifold base should be prepared by users.

Variations/Purpose of Usage (Guide)

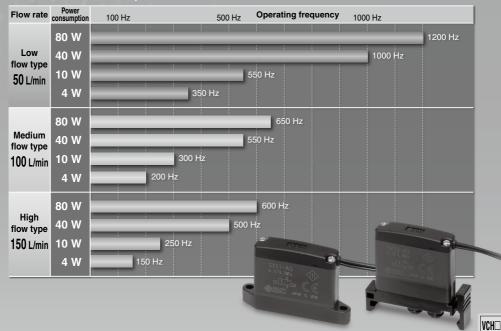

Specifications	Driver	Continuous	Power	OFF response time			
Specifications	Driver	energization	consumption	50 L/min	100 L/min	150 L/min	
1 Ultra high frequency type 500 to 1200 Hz For power saving driver (Refer to page		_	80 W, 40 W	0.4 ms	0.55 ms	0.75 ms	
2 High frequency type 250 to 550 Hz Control driver is not necessary.		(Note)	10 W	0.4 ms	0.55 ms	0.75 ms	
3 Super energy-saving type 150 to 350 Hz Control driver is not necessary.		Possible	4 W	0.4 ms	0.55 ms	0.75 ms	

(Note) Please consult with SMC for continuous energization.

O Variations

All models have the same body size.

Select a model according to applications and purposes.

High speed response required for both ON and OFF

Select the 80 W or 40 W type.

Model	Power	Flow rate	Max. operating	Response time (ms)			
Model	consumption	consumption Flow rate		ON	OFF		
SX1□-A	80 W	50 L/min	1200 Hz	0.45	0.4		
-В	40 W	50 L/min	1000 Hz	0.55	0.4		
-E	80 W	100 L/min	650 Hz	0.55	0.55		
-F	40 W	100 L/min	550 Hz	0.7	0.55		
-J	80 W	150 L/min	600 Hz	0.6	0.75		
-K	40 W	150 L/min	500 Hz	0.8	0.75		

* Current needs to be limited.

High speed response required for OFF only without use of special control circuit

Select the 10 W type.

Model	Power	Flow rate	Max. operating	Response time (ms)			
Model	consumption	Flow rate	frequency	ON	OFF		
SX1□-C	10 W	50 L/min	550 Hz	0.9	0.4		
-G	10 W	100 L/min	300 Hz	1.1	0.55		
-L	10 W	150 L/min	250 Hz	1.35	0.75		

* Please consult with SMC for continuous energization.

Saving energy and	Select the	Model	Power consumption	
continuous energization	4 W	SX1□-D	4 W	Γ
required	type.	-н	4 W	Γ

Note 1) 24 VDC, Duty ratio 1:1

- 80 W: Current needs to be limited by using an energy saving driver circuit.
- 40 W: Current needs to be limited by using an energy saving driver circuit.
- 10 W: Energizing time is one second at a maximum. Please consult with SMC for continuous energization.

4 W: Continuous energization is possible.

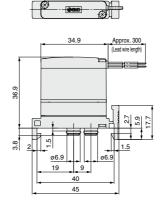

Note 2) The response time and maximum operating frequency are not guaranteed. (Actual values based on SMC test conditions)

Control Method (Operation example with an energy saving driver circuit)

 Control with 2 power supplies, starting power supply and holding power supply.
 Switching system from high voltage to low voltage

2. High speed switching control of high voltage by PWM control*. (*: PWM control circuit not currently available.)

Be sure to read this before handling the products.

(Note) 80 W type: 3 to 6 VDC 40 W type: 4 to 8 VDC 10 W type: 8 to 16 VDC

Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

Continuous Energization (at 24 VDC)

⚠ Caution

Power consumption 80 W type: Not available
 When operating with an energy saving driver, continuous
 energization with the holding voltage of 3 to 6 VDC is possible.

2. Power consumption 40 W type: Not available

When operating with an energy saving driver, continuous energization with the holding voltage of 4 to 8 VDC is possible.

3. Power consumption 10 W type: Please consult with SMC.

When operating with an energy saving driver, continuous energization with the holding voltage of 8 to 16 VDC is possible.

4. Power consumption 4 W type: Available

Energized Time/Non-energized Time (When not using power saving driver)

1. Non-energized time (OFF) must be set longer than the energized time (ON).

For use with voltages other than 24 VDC, please consult with SMC with the operating condition information of pressure, voltage, energized time and non-energized time.

Others

- If the valve is energized without air supply, the coil may be burned. Make sure to supply pressure to the valve when energizing.
- Please contact SMC for the product usage with a voltage at 75 VDC or more. Standard required by CE mark is different.
- Since this valve is air return (differential pressure return) type, the valve may not close due to back pressure when the flow on the downstream side is restricted extremely.
- 4. Since this valve is air return (differential pressure return) type, the air is discharged to the OUT side momentarily until the valve returns when the IN side is pressurized. Be careful when pressurizing the valve.
